CLAIM AMENDMENTS:

AUG 27 2007

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A messaging system comprising:  
an address menu having an identification field with more than one associated address  
fields field, each of the address fields operable to maintain an address for a  
messaging receipt option; and  
a graphical user interface operable to present the address menu; and  
an address box capable of receiving multiple addresses for subsequent transfer through  
use of a single selector.
2. (original) The system of claim 1 wherein the identification field maintains a contact alias for a potential recipient of an outgoing message.
3. (original) The system of claim 1, further comprising:  
a computer storing a first address menu for a first user and a second address menu for a  
second user; and  
an interface engine associated with the computer and operable to communicatively  
couple a remote computer associated with the first user to the computer storing  
the first address menu.
4. (original) The system of claim 3 wherein the computer storing the first address menu is  
operable to initiate communication of internet protocol packets.
5. (original) The system of claim 3, wherein the remote computer is communicatively  
coupled to the computer storing the first address menu via a cable modem.
6. (original) The system of claim 1, further comprising:  
a first address field associated with the identification field, the first address field for  
maintaining a first address type of a contact; and

a second address field associated with the identification field, the second address field for maintaining a second address type of the contact.

7. (original) The system of claim 6 wherein the first address type is selected from the group consisting of an email address, a telephone number, an instant messaging address, a short messaging service address, an enhanced messaging service address, a multimedia messaging service address, and a facsimile number.

8. (original) The system of claim 1, wherein the identification field is operable to maintain a contact name, further comprising:

a first address field associated with the identification field, the first address field for maintaining a first address of the contact name;

a second address field associated with the identification field, the second address field for maintaining a second address of the contact name; and  
the first address selected from the group consisting of an email address, a telephone number, an instant messaging address, a short messaging service address, an enhanced messaging service address, a multimedia messaging service address, and a facsimile number.

9. (original) The system of claim 8, further comprising an attachment engine operable to convert a file attached to an outgoing message into a format receivable by a device associated with a messaging receipt option.

10. (currently amended) A graphical user interface (GUI) comprising:

a first user-selectable portion having associated text that includes "email", the first user-selectable portion to initiate addition of an email address for a contact into an address box of an electronic message; and

a second user-selectable portion having associated text that includes "phone", the second user-selectable portion to initiate addition of a telephone number for the contact into the address box of the electronic message; and

a selector for initiating delivery to both the email address and the telephone number when both the email address and the telephone number are in the address box at the same time.

11. (currently amended) A messaging method comprising:

initiating presentation of a first user-selectable item for viewing a collection of contact information;

receiving a signal indicating a user selection of the first user-selectable item; and initiating a graphical user interface (GUI) element to present an address menu comprising contact information for at least one two potential addressees addressees, the address menu having a first selectable address and a selectable second address for the at least one potential addressee at least one of the two potential addressees.

12. (original) The method of claim 11 further comprising:

recognizing a selection of the first address and the second address; and

initiating presentation of the first address and the second address in an address box.

13. (original) The method of claim 11, further comprising:

receiving a signal indicating a request to prepare an outgoing message; and

initiating presentation of a messaging graphical user interface (GUI) to present a message composition template comprising an address box and a message input box.

14. (original) The method of claim 11, further comprising:

modifying the address menu in response to a user input comprising addition of another potential addressee;

subsequently initiating the graphical user interface (GUI) element; and

presenting the address menu as comprising contact information for the at least one potential addressee and the another potential addressee.

15. (original) The method of claim 11, further comprising:

receiving a signal indicating a request to prepare an outgoing message;

presenting a messaging graphical user interface (GUI) element to present a message composition template comprising an address box and a message input box; recognizing a selection of the first address; and initiating presentation of the address box populated with the first address.

16. (original) The method of claim 11, further comprising:  
receiving a signal indicating a request to prepare an outgoing message;  
presenting a messaging graphical user interface (GUI) element to present a message composition template comprising an address box and a message input box;  
recognizing a selection of the first address;  
initiating presentation of the address box populated with the first address; and  
initiating presentation of a second user-selectable item having associated text that includes "send".

17. (original) The method of claim 16, further comprising:  
recognizing a selection of the second address;  
receiving a signal indicating a user selection of the second user-selectable item; and  
initiating communication of the outgoing message to the first address and the second address.

18. (original) The method of claim 17 further comprising attaching a file to the outgoing message.

19. (original) The method of claim 18 further comprising converting the file into a format receivable by a device associated with the first address.

20. (currently amended) A computer readable media comprising:  
a plurality of instructions for providing a first user-selectable button in connection with preparation of an electronic message; in response to receiving a user selection of the first user-selectable button, initiating a graphical user interface (GUI) element to find at least one address for the message, the GUI element comprising an address menu having an identification field with more than one associated address

fields a plurality of identification fields that each have at least one associated address field, each of the address fields operable to maintain an address for a messaging receipt option; receiving a selection of an address with the GUI element from at least two of the identification fields; and populating an address box with at least one of the address addresses.
